**Vultur/GLUC**

**[www.vultur.unicauca.edu.co](http://www.vultur.unicauca.edu.co)**

**Grupo de Investigación en Educación y Comunicación  
Universidad del Cauca**

# Antecedentes...

# Planteamiento del Proyecto...

- Soporte de español o facilidad para españolizar
- Posibilidad de construir comunidades virtuales
- Licencia *GPL* o compatible
- Niveles de acceso y usuarios
- Buen manejo de archivos y directorios
- Usabilidad, transparencia para el usuario final
- Proyecto *Maduro* o con una versión estable reciente
- Buena documentación

# Objetivos...

- Obtener un conjunto de criterios para evaluar CMS (Content Management System) de acuerdo con los requerimientos de la Red de Investigación Educativa - ieRed.
- Identificar los CMSs Libres que cumplan con la mayor parte de los requerimientos, y seleccionar algunos para evaluarlos.
- Seleccionar un Sistema Administrador de Contenidos e implementarlo para la Red de Investigación Educativa - ieRed.
- Migrar la información que se viene manejando en los proyectos asociados a ieRed en al Sistema Administrador de Contenidos implementado.

# Plan de trabajo...

Metodología: Exploración Tecnológica Iterativa

- Montar un servidor réplica de ieRed como equipo de pruebas.
- Realizar una primera definición de criterios de búsqueda a partir de los requerimientos.
- Búsqueda de Proyectos de CMSs Libres y Activos que cumpla con la mayor cantidad de requerimientos.
- Selección y Evaluación de un pequeño grupo de CMSs.
- Definición de los criterios finales para realizar la evaluación y escogencia de un CMS.
- Implementación del CMS seleccionado en el servidor de ieRed.
- Migración de la información al nuevo portal de ieRed.

# Heurístico...

"Técnica de la indagación y del descubrimiento. En algunas ciencias, manera de buscar la solución de un problema mediante métodos no rigurosos, como por tanteo, reglas empíricas, etc."

Real Academia de la Lengua Española

# Ariadne

The screenshot shows a web browser window with the URL <http://www.ariadne-cms.org/>. The page features a blue header with the "Ariadne CMS" logo and navigation links for "Library", "Community", "Developers", and "Download". A search bar is located in the top right corner. On the left side, there is a vertical menu with links for "Features", "Demo", "Cases", "Credits", and "News". The main content area is divided into two sections: "ARIADNE" and "NEWS".

**ARIADNE**

Ariadne is an Open Source, Multilingual Web Application Server and Content Management System built on PHP. Ariadne has a rich user interface which includes wizards, pulldown menus, and an extremely flexible and easy to use WYSIWYG editor.

Ariadne has been used for anything from a personal website to an enterprise portal with more than a million pages of content. It can be used as a very friendly CMS, with almost no knowledge about CMS systems or HTML required, or a full featured enterprise portal with editorial workflow, staging, branding, etc.

[Read more about Ariadne's features here.](#)

**NEWS**

**Cross-domain Partial Page Updates with JavaScript**

*28 September*

Until now we've kept the news here strictly Ariadne related, but from now on we'll make an exception once in a while for cool stuff that might be usefull for other web developers. Here's a javascript technique which opens a lot of possibilities for easy content 'syndication'.

Ajax is the new cool kid on the block. And there's nothing wrong with that, it is cool technology, and the hype surrounding it has at least the bonus of re-introducing people with javascript. The modern, mature and super flexible javascript that is.

But there are a few problems with Ajax, which can be overcome by stepping back from the cool kid and take a look around at the 'old' techniques. The most obvious problem is a feature of the XMLHttpRequest method or object (depending on your browser flavour of choice). Its called the *same-origin* security feature. This is the built-in safety check, which prevents a script to get content from a different host than the host that served the script, or page.

Here's a technique which gets around that limitation, and should work on almost any browser.

**Ariadne Developer Meeting 30 sep 2005**

*27 September*

Greetings everyone,

Next friday, 30 sep 2005, we will host another Ariadne developers meeting in our office at the Piet Heinstraat 13 in Enschede.

Starting at 16:30 you are invited to come over and have a beer, some 'hapjes' and discuss ariadne and other matters vital for a long and healthy life.

### Campsite News

September 07, 2005

**[Campsite 2.3.1 released](#)**

We are pleased to announce a maintenance release of the 2.3 "Niko" branch of Campsite.

Version 2.3.1 brings:

- Installation fixes for Fedora
- Compatibility with PHP 5
- Administration interface bug fixes
- Updated Russian localization
- New sample template packages
- Important updates and extensions to the user manual and the INSTALL file
- Admin interface can now run on any port
- Template language fixes

To download, [click here](#).

To see the complete changelog, [click here](#).

August 10, 2005

**[Campsite Development Turns More Transparent](#)**

The Campsite team has transitioned to a new tool named Trac that enables transparency to the development process as never before. You can see what's happening on a daily basis, what's been fixed, and any new issues that have come up. It really gives you a good sense of how much is going on in a project.

### CMSimple

This Spanish version is translated by Antonio - [www.nonopp.com](http://www.nonopp.com) - and first published at CMSimple.dk December 22, 2004.

There is an updated Spanish language file available:  
[Spanish update](#) (7,5 KB) by Antonio (December 22, 2004)

--

CMSimple es un gestor de contenido simple para el mantenimiento rápido de pequeñas webs privadas o comerciales. Es **simple**, **pequeño** y **rápido**!

**¡Y es libre!** Esto significa que no es solo Código Abierto, es Libre según lo define FSF, es decir Software Libre. [Leer mas aquí...](#)

Tiene un editor WYSIWYG adaptado a IE en Windows y Mozilla - ambos probados también en Win y MacOS. [Leer mas aquí...](#)

- **Sencillo** - instalación sencilla y fácil de modificar. La web entera es almacenada en un simple archivo HTML - no hay necesidad de base de datos, y si lo prefiere, usted lo prefiere, puede editar la web con su editor HTML favorito, subir el archivo de contenido y ¡Tener una página web dinámica!
- **Pequeño** - El sistema completo de gestión ocupa menos de 50 kb,
- **Rápido** - El editor WYSIWYG (What-You-See-Is-What-You-Get) enlaza, maneja imágenes y edita los archivos del sistema de una forma automática creando copias de seguridad al mismo tiempo cuando sale. Todas estas características hacen de CMSimple simplemente rápido!

#### ezContents back to GPL/GNU license

We have decided to change ezContents license back to GPL/GNU license. This should help the continuation of the development in the open-source community. All future version of ezContents will be released under that license.

#### We are up again.

The ezContents website was unavailable due to server fail. Our server is in maintenance. We have switched to our backup server. The forum can be somewhat outdated. Sorry for any inconvenience that it might caused to you.

Updated on: Friday January 14, 2005

#### ezContents version 2.03

This is primarily a security patch release; but the list of changes/bugfixes in this release includes:

- Fix to Remote Code Execution Patch vulnerability in module.php
- Fix to other reported Remote Code Execution Patch vulnerabilities (CAN-2004-0070)
- Fix to error trapping in module configuration form.
- Increase to size of login pop-up box.
- Fix to security bypass on login giving access to any restricted function.
- A number of HTMLArea fields functionalised on admin and submission

### InfoGlue Content Management Platform

InfoGlue is an advanced, scalable and robust content management / Portal platform written in 100% Java. It is suitable for a wide range of applications and organisations. Typical uses include public websites, portal solutions, intranets and extranets. The platform is released under the GPL-license and it can be run on almost any platform, including Microsoft Windows, Mac OS X and most Linux distributions, and it is compatible with most major databases such as MySQL, SQL Server, Oracle and DB2.

Key features includes full multi-language support, excellent information reuse between sites and extensive integration capabilities. A dynamic visual page builder ensures that also templates can be reused by non technicians and the latest release also supports advanced workflows as well as very detailed access control both internally and externally.

We have dedicated ourselves to make InfoGlue the fast, reliable and cost effective way to manage and publish your organisations information on the web. It is not only userfriendly and packed with great functionality but also easy to maintain which is an important factor when it comes to total cost of ownership.

This site and the InfoGlue community is maintained by the community itself and it is totally independent from all companies and organisations. The community has only one priority and that is to offer a strong Open Source alternative on the CMS market. Many consultant firms have already started working with the platform and we will allow them to advertise their offers & services on this site as we feel they contribute to making InfoGlue a good choice for customers.

#### Latest news (Archive)

# LucidCMS

The screenshot shows a web browser window with the address bar containing `http://lucidcms.net/`. The page title is "lucid CMS » Open Source Content Management System". Below the title, there are three columns of features:

- Transparent**: Stays out of the way so you can get the job done... (Image: Whiteboard)
- Simple**: Content management so simple, it's child's play... (Image: Yellow duck)
- Powerful**: Powerful enough for even the most advanced users... (Image: Paintbrush)

Below these columns is a navigation menu with links: [Welcome](#), [Manual](#), [Forum](#), [Bugs / To Do](#), and [Downloads](#).

**Location:** Welcome

lucidCMS is a simple and flexible content management system for the individual or organization that wishes to manage a collection of web pages without the overhead and complexity of other available "community" CMS options.

lucidCMS is designed from the ground up to be easy to install and use. It will run efficiently on shared hosting accounts where disk space and features may be at a premium. Once installed, all configuration options can be changed from the user interface.

lucidCMS began as a rewrite of Adam Newbold's Open Source project, "Whisper" (aka "Pages" -- <http://whisper.cx> ). That program filled a gap in the CMS world where we were looking for a simple content management solution that was not based on a "community" or "news" model. The target audience is individuals and organizations that wish to manage *pages*. It is not a blog, gallery, forum, or news engine -- although it can handle those functions via easily added plugins. It is primarily a system to manage a collection of individual pages to be rendered dynamically from templates and

**Mambo Development Survey results**  
Written by Mambo Foundation

 The results of the first Mambo Foundation Users' Survey have been tabulated and are released. The Survey, which proposed questions relating primarily to development priorities, was the first in a series of new initiatives by the Foundation to reach out to the membership and get them involved in the roadmap for the Mambo Content Management System.

480 responses were received, the vast majority from developers. The responses showed a clear preference for developing Mambo functionality along more robust lines. Respondents seemed to indicate a desire to see an increase in functionality, even if it came at the cost of additional complexity.

The most commonly requested new feature was, perhaps not surprisingly, an increase in the capabilities of the Mambo user management system. Another hot topic was the inclusion of enhanced multi-lingual abilities, reflecting Mambo's increasingly strong role overseas, in non-native English countries.

### WHAT IS MYSOURCE?

MySource is a powerful, open source website and intranet content publishing and management system. It is designed to enable technically unskilled users to build and maintain their own web solutions securely, professionally and inexpensively.

MySource is designed to allow people with no web development skills to build professional, corporate strength websites and intranets. MySource has an easy to use interface so people who only know how to use a word processor and a web browser can create, publish and manage their own web projects.

MySource supports multiple authors with different access privileges so allowing businesses to have many people contribute to the one site. To ensure these people can work together simultaneously.

## Plone: A user-friendly and powerful open source Content Management System

This is the development and community site for Plone. You'll find news about Plone and its related products, documentation, links to downloads, and information about the non-profit Plone Foundation.

[Download Plone!](#) [Documentation](#) [Books](#) [Plone Foundation](#) [Symposium 2005](#)

 Plone has a long history with New Orleans. Please donate to the hurricane relief fund.

## What is Plone?

**Plone is powerful and flexible.** It is ideal as an intranet and extranet server, as a document publishing system, a portal server and as a groupware tool for collaboration between separately located entities.

**Plone is easy to use.** The Plone Team includes usability experts who have made Plone easy and attractive for content managers to add, update, and maintain content.

**Plone is easy to install.** You can install Plone with a click-and-run installer, and have a content management system running on your computer in just a few minutes.

# TikiWiki

The screenshot shows a web browser window with the address bar containing <http://tikiwiki.org/>. The page title is "TikiWiki Community Portal". Below the title is a description: "Tikiwiki is a full featured Free Software (GNU/LGPL) Wiki/CMS/Groupware written in PHP and maintained by an active and international community of benevolent contributors." A navigation menu includes links for "Download", "Install", "Hosts", "Features", "Community", "Forums", "Bugs", and "Contact". The main content is organized into three columns: "Main Tikiwikis", "Localized Tikiwikis", and "Thematic Tikiwikis".

**Main Tikiwikis**

- ⇒ <http://tikiwiki.org>  
Also called tw.o, it's the Central Community Collaboration website, used by Tikiwiki contributors and users to share information about working with Tikiwiki.
- <http://dupli.tikiwiki.org>  
Read-only and Fast mirror of the tw.o content.
- <http://doc.tikiwiki.org>  
The Official Tikiwiki Documentation website is ruled by a random contributive effort, and is far from extensive, but holds information that can't be found on tw.o.

Also visit

- Project on Sourceforge**  
Used in Tikiwiki community for the CVS and mailing-lists.
- Tikiwiki on Freshmeat**  
General project statistics.

**Localized Tikiwikis**

-  <http://br.tikiwiki.org>
-  <http://de.tikiwiki.org>
-  <http://fr.tikiwiki.org>
-  <http://hu.tikiwiki.org>
-  <http://nl.tikiwiki.org>
-  <http://uk.tikiwiki.org>

**Thematic Tikiwikis**

- <http://dev.tikiwiki.org>  
The development community website. Featuring trackers and developers guidelines.
- <http://cvs.tikiwiki.org>  
This cvsmonitor displays the CVS activity in the Tikiwiki Development Community.
- <http://cc.tikiwiki.org>  
This tikiwiki is gathering various Tikiwiki users and contributors interested in changing the world.
- <http://mobile.tikiwiki.org>  
That tiki uses the mobility features as WAP browsing or use with a PDA.
- <http://security.tikiwiki.org>  
Websites security is more and more an important topic due to script kiddies activity.

# WebGUI

The image shows a screenshot of a web browser displaying the WebGUI website. The browser's address bar shows the URL <http://www.plainblack.com/spreadwebgui>. The website header features the 'plainblack' logo and navigation links for 'Plain Black', 'Services', 'WebGUI', 'Community', 'Download', 'Clients', and 'Documentation'. A secondary navigation bar includes links for 'Pricing', 'Sites', 'Why Open Source?', 'wG v. HTML v. SP', 'F.A.Q.', 'Features', and 'Demo'. The main content area is titled 'WebGUI' and contains several paragraphs of text, an illustration of a purple alien character, and a section titled 'Why Use WebGUI?' with sub-sections for 'Short Friendly URLs', 'Rich User Interface', and 'Personalization'.

## WebGUI

WebGUI (pronounced web-gooley) is one of the most popular open source content management systems (CMS) available today. It is downloaded over 5,000 times per month and is in use as an Intranet application framework in several Fortune 500 firms in the United States.

WebGUI is a content management platform built to allow average business users to build and maintain complex web sites. It is modular; pluggable, and platform independent. It was designed to allow the people who create the content, to manage it online, rather than content management taking up the time of the busy IT Staff.

## What is WebGUI?

Many people are confused about what WebGUI is. Some think it's a simple content management system. Others believe it is an application server. And still others think that it's not worthy of being called either. Our clients call it a godsend.

In truth WebGUI is an application framework that handles content management. Once you start using WebGUI it will become clear how well it handles content management, but it may not be clear how easy it is to extend to do other tasks.

If you're used to using application servers then you're probably used to the app server handling all the mundane tasks like database connectivity, session management, and security. WebGUI does all those things, but it goes one step further. When you build an application in WebGUI (called an Asset), you're actually building a reusable application object.

Now you're probably thinking, *what does that mean?* What it means is that once your application is built, it can be reused over and over on different portions of your site (perhaps for applications you never even

The illustration depicts a purple, multi-limbed alien character with a large blue eye. The character is holding a sign with the 'wG' logo in its right hand and a megaphone with the same logo in its left hand. The character is standing on a grey surface, and a white envelope with the 'wG' logo is lying on the ground in front of it. The background is a simple blue sky and grey ground.

## Why Use WebGUI?

### Short Friendly URLs

You'll never have ugly numeric IDs or other things in your URLs that make it hard for search engines and people to use your site.

### Rich User Interface

WebGUI has a rich user experience allowing users to place their content through a drag-n-drop interface; use helpers to pick dates, colors, and more; and a highly customizable rich editor to allow users to format content quickly and easily.

### Personalization

Your users will see their own view of your site through dynamically generated navigation and content. In addition, you can choose to display content based upon your user's viewing habits.

# Aprendizajes...

- W3C y .DEB
- El tiempo -> 3 semanas
- Priorización de criterios
- Surgimiento de nuevos criterios de evaluación
- Construcción de documentos
- Implementación de Moodle
- Proyectos nuevos o no maduros

# Perspectivas...

- Instalar Plone en el servidor de ieRed para dar soporte a la parte de publicaciones tanto de los grupos de investigación como de los proyectos y seminarios que se adelantan.
- Configurar el soporte que se dará a partir de Moodle y Plone.
- Crear una imagen corporativa que identifique a ieRed en ambas plataformas.
- Ofrecer servicios tanto de comunicación como de publicación a otras dinámicas y grupos.

GRACIAS
